Dear Kirk:

When I was trying to come up with someone to appear on the Morning Show this morning, I did come up with a number of people who said they would be happy to be on the show, but couldn't this morning. Some of the ideas that came up are:

Esmail Zanjani, Ph.D., fetal stem cell research. He came up with a revolutionary technique that allows physicians to transplant stem cells into developing fetuses, which corrects genetic blood defects like Hurler's Syndrome and sickle cell anemia. He is a very articulate and animated speaker.

F. Roy MacKintosh, M.D., Ph.D., breast cancer research; he is involved in research as well as the clinical side of breast cancer. He is quieter in his demeanor, but knows his subject and is articulate.

Sachiko St. Jeor, Ph.D., and **Barbara Scott, M.P.H., R.D.**, foods and disease prevention. Either one of these women can talk about new findings in the relationship between food and disease, the importance of nutrition in fighting disease, and new vitamin requirements.

David P. Westfall, Ph.D., can talk about how the different drugs work that are used in fighting heart disease. I listened to him present at Mini-Medical School last night, and he is good at putting complicated processes into language the lay person can understand.

Joan Zenan, M.L.S., librarian at Savitt Medical Library. I was watching the story this morning about fraudulent research and it occurred to me that people in the community probably don't know that they can come to the library and can find out which researchers have been charged with falsifying data. Joan knows the library inside and out and is always happy to share her resource with the community.

Iain Buxton, Ph.D., is doing research on the causes of premature labor. If he and his researchers can come up with the answers, it could mean closing down one of the most expensive areas of any hospital, the neonatal unit, saving millions every year.

This should be a good start, and there are more where they come from.

Ideas faxed to Kirk Frosdick, producer of the KOLO-TV morning show.
