February 26, 1988

Gerald M. Smith  
Manager  
Schell Resource Area  
BLM  
Star Route 5, Box 1  
Ely, NV 89301

Dear Mr. Smith:

Thank you for granting the Animal Protection Institute the opportunity to participate in the planning for the Wilson Creek Allotment. We regret that we're unable to have a staff member at the meeting to take part in the discussions of the consensus process. We realize our absence presents a hindrance to that process.

However, we do appreciate being able to participate since API represents 170,000 individuals who are vitally interested in the protection and conservation of our public lands. We are specifically concerned with the protection of wild horses and their habitat. But our concerns also include the ongoing provision of wildlife habitat and natural environments in their optimum ecological state for the enjoyment, appreciation, and (direct and/or indirect) usage by hikers, photographers, campers, bird watchers, nature lovers and others who benefit from the existence of these lands.

There is rising alarm amongst our members that continued overgrazing by and overstocking of domestic livestock is the prime cause of poor ecological conditions and in many places continued downward trends.

We, therefore, take a very strong view of the need to pinpoint cause of damage and take effective remedial management action.

continued . . .

It is our experience that the continued reductions in the wild horse population have had no significant impact on the ecological conditions of the areas from which they've been removed.

Our understanding of the public land laws is that the intent is for remedial action. In this regard, remedies need to be based directly on defining actual cause of damage.

We believe that the optimum number of wild horses and other native species (elk, bighorn, mule deer, and pronghorn) can only be established as the result of monitoring and utilization data that is based on specific impact of each grazing species on the land. With regard to wild horses, we agree with and request full implementation of 4710.4 and 4710.5 in Regulations that state:

4710.4 Management of wild horses and burros shall be at the minimum level...

4710.5 If necessary to provide habitat for wild horses or burros to implement herd management actions or to protect wild horses or burros to implement herd management actions or to protect wild horses from disease, harassment or injury the authorized officer may close appropriate areas of the public lands to grazing use by all or a particular kind of livestock.

We do not agree that reseeding in areas of downward trend within a wild horse use area is an effective or appropriate remedial management option where damage is the result of uneven distribution of livestock--e.g., congregating near water sources when it is the nature of cattle to congregate near water sources. The preservation of wetlands and riparian habitat is of priority concern. But the remedial action to protect riparian lands within a wild horse use area should be closure to livestock (4710.5) rather than fencing as a first consideration.

We oppose the number of fences on the public lands that service livestock usage while discouraging other users. Within designated wild horse use areas where fences impede wild horses and wildlife as well as hinder rather than enhance true multiple usage we are definitely opposed and feel fences should be removed from within wild horse areas.

We are in agreement with the Monitor Elk Herd Management Plan.

Again we regret that we are unable to attend the local meetings for the Wilson Creek Allotment planning and again thank you for granting us this opportunity to respond with written comments.

Sincerely,

*Nancy Whitaker*

Re: Yerlom Creek Allotment

I am an interested party in the management of wild horses and their designated habitat areas, I appreciate this opportunity to express my concerns for wild horses in the Yerlom Creek Allotment.

I think the question raised in the Oct meeting about priority usage is the most relevant and the most conflicting and controversial issue facing wild horses there. It will come up when there is damage and when there is an increase in forage production. I oppose the very idea of machine preference based on priority stocking levels and believe AUMs should be under the control of BLM with forage allocations made on the basis of range data, statutory directives, and the expertise of professional range managers.

as to carrying capacity, type of species,  
number allowed, season of use.

When there is damage within an NVA, I would expect the 4710.5 closure to livestock permission to be imposed and strict enforcement of permit restrictions in order to achieve a thriving ecological balance within the NVA. When there is an increase in fence production within an NVA, I'd expect the AMI to increase. When there is a conflict between wildlife, wild horses and cattle there is a need for a very clear definition differentiating between a user to be controlled by permit restrictions and ~~the~~ <sup>the</sup> species that ~~are~~ <sup>are</sup> integral components of the natural system to be considered part of the biological diversity that constitutes the ecological balance to be protected, preserved and maintained in a thriving condition.

(2)

My second concern has to do with two-party agreements (CMAs) affecting wild horse use areas.

In light of the many conflicts and the fact herds/stock distribution is a major problem everywhere<sup>in the allotment</sup>, it would seem impossible for BLM to enter into any two-party agreement, that establish stocking ratios for a three year period or make any guarantee of continuing inactive preference without shortchanging other interests. I oppose two-party agreements that affect forage within NVAs. CMAs may be possible outside NVAs without violating public participation rights, but not inside.

My third concern has to do with vegetation control measures as a means of achieving the biological diversity of a thriving ecological state (flora, fauna) of the natural system. I believe there is a vast difference between burning or clearing

in order to destroy invader species followed by returning  
to native herbs and grasses to achieve a dynamic  
system and ploughing up the land to increase pasture  
in order to increase the number of livestock and  
wild horses. Wild horses will increase without  
vegetation conversion measures, with them their  
rate of increase will increase. I oppose these  
measures in an HVA unless it is clearly  
demonstrated as the only means to control  
invader species and restore a thriving ecological  
balance. Assessing the impact of sheep versus  
cattle, the impact of restricting seasonal use or  
numbers as permit restrictions, the impact of  
rest/rotation grazing ~~etc~~ should be considered  
as alternatives before burning, chaining, ploughing,  
spraying etc are undertaken. Elevation is the  
newer of more than AVMS concerned so that

(3)

increasing ALMs simply to increase numbers without addressing other factors such as trampling, grasses, soil compaction, the breakdown of streambanks, soil erosion; congregation near water sources is not sound range management and vegetation conversion is not range improvement. I believe vegetation conversion measures need to be put through the EA process before being carried out--what are the impacts on the ~~welfare~~ of off for cover, and on other impacts on protected species - migratory birds, nongame animals, T & E species, ~~which have protection~~ <sup>etc.</sup> ~~legislations, as do wetlands and raptors, and what is the purpose, and is it within the overwhelming public mandate that demands conservation of nature principles and practices for sustainable use?~~

Conflict No 11 refers to "native summer range for livestock ---". Livestock do not have native ranges. Their owners have grazing privileges thro the permit system.

I object to the terminology because it reinforces  
false attitudes about multiple use privileges.

Because my concern for the public lands goes beyond  
myself to my own human environment and that  
of generations to come, I view Conflict No 13 with a  
great deal of consternation. This is an issue I hope will  
be on the agenda of the next meeting. The "concerns"  
are not up for grabs, more than for yourself, they are  
governed. If trespass livestock is a problem, it  
is a law enforcement problem. If this is the case,  
perhaps the one addressing it in a meeting should be  
from the law enforcement division of the State Office.

I regret that as an interested party I am not  
able to attend meetings in obscure corners of the public  
lands and thank you again for arranging to include  
input in writing in a way that the consensus of the  
on-site group is broadened to reflect the concerns  
of the general public. While I seem to be often at odds  
with BLM, in reading the minutes and studying the  
background report I have to admit you did a pretty  
good job of reporting and conducting the meeting.
