Rod Harris, District Manager
BLM Elko District Office
P.O. Box 831
Elko, Nevada 89801

Dear Mr. Harris,

We wish to be considered an interested and affected party for the amendment to the Wells Resource Management Plan which will focus on better management of wild horses in the area, as our concern by law is for the protection of wild horses and their habitat in Nevada.

Our main concern for the wild horses during the amendment to the plan is censusing, migration, and distribution as well as who ate what....when and where.

Some of the information we would need to evaluate the plan in question would be:

- 1) Actual Livestock Use
 - (a) Actual Use Reports
- 2) Season of Use by Wild Horses
- 3) Season of Use by Livestock
- 4) Seasonal Census...showing where the majority of wild horses graze during seasonal yearly movements.
- 5) Use Pattern Mapping
- 6) Location of water used by livestock and wild horses.
- 7) Map of the Herd Areas in relationship to the allotment that shows distribution of horses, cows, and water.

In the issues and concerns you stated that wild horses are increasingly difficult to manage where there is considerable intermingling of public and private properties.

- 1) Do you have monitoring data that substantiates that wild horses are causing vegetation/soil damage?
- 2) How do you know whether or not the movement is not the result from the drought?
- 3) Do you know whether or not this is "historical migration" in times of severe climatic influences?
- 4) Are practices within herd areas affecting their seasonal use?
- 5) Are the issues related solely to increasing numbers?

Before we could make a recommendation on the issues or alternatives, we would have to know what area horses are using what are their critical use areas; and what affect would change in livestock make on wild horses in their territory.

We would also need to know numbers of wild horses, and the forage capacity for their herd area.

Rod Harris, District Manager
February 5, 1992
Page 2

Any specific conclusions or technical recommendations you present in any of the allotments in question should be thoroughly defined, well documented statements that support your decisions to maintain the public lands in a thriving natural ecological balance and prevent a deterioration of the range.

Again, thank you for the opportunity to participate in the scoping process and proposed amendment to the plan. Please keep us informed.

If you have any questions, please feel free to call.

Sincerely,

Catherine Barcomb

CATHERINE BARCOMB
Executive Director

BLM SEEKS COMMENTS ON MANAGING HORSES IN WELLS RESOURCE AREA

The Bureau of Land Management (BLM) in Elko is preparing an amendment to the Wells Resource Management Plan which will focus on better management of wild horses in the area.

The amendment will concentrate on four aspects of the program: delineating wild horse herd management areas; identifying wild horse habitat objectives; establishing wild horse management direction in terms of initial herd size, criteria for adjusting initial herd size and constraints on other resources; and combining herd areas. The areas being considered for combination are parts of the Cherry Creek Herd Area, the Maverick-Medicine Herd Area and the Antelope Valley Herd Area.

Bill Templeton, Nevada State Director of the BLM, says the Wells Resource Area is presently managed under the Wells Resource Management Plan approved in 1985. That resource management plan identifies wild horse Herd Areas and calls for monitoring populations and habitat conditions, conducting gathers and maintaining populations within a range of 550 to 700 animals, constructing six water developments and removing wild horses from private lands if required. However, the plan did not establish wild horse Herd Management Areas.

- MORE -

BLM SEEKS COMMENTS ON MANAGING HORSES IN WELLS RA - 22222

The proposed issues to be addressed in the amendment would be to determine where and at what levels wild horses would be managed in the Wells Resource Area. A major issue influencing the amendment are the difficulties of managing wild horses on lands where there is a considerable amount of intermingling of public and private properties.

Comments by the public are invited in identification of planning issues, review of preliminary planning criteria and the formulation of alternatives. After the scoping period, a resource management plan amendment and associated environmental assessment will be prepared.

Comments must be postmarked no later than Friday, March 6. They should be sent to Rod Harris, Elko District Manager, BLM, P.O. Box 831, Elko, NV 89801. Specific questions may be directed to Bruce Portwood, wild horse specialist, at (702) 753-0200.

February 19, 1992

Mr. Rodney Harris, District Manager
Bureau of Land Management, Elko District
Post Office 831
Elko, Nevada 89801

Dear Mr. Harris:

Thank you very much for the opportunity to provide comments on the Bureau's Notice of Intent to prepare an amendment to the Wells Resource Management Plan. (Federal Register Vol. 57 p. 3062, 1/27/92.)

The notice of scoping leads the reader to believe that all herd area boundaries in the Wells Resource area are open to debate, which is not the case. The purpose of the Notice must be restricted to the re-delineation of the boundaries, to exclude only those portions that apply to the checkerboard lands. By law, the checkerboard lands must remain as wild horse herd areas, but the management of wild horses will be restricted to those portions that exclude the checkerboard. There is no question as to the validity of the boundaries for the Maverick-Medicine, Cherry Creek, Antelope Valley, and the public land portions of the Goshute, and Spruce-Pequop.

We strongly recommend the wording in all subsequent documents clearly state the purpose of the Notice of Intent is to exclude the portions of checkerboard lands from the wild horse herd management areas, and to formalize the now existing herd use area boundaries into herd management area boundaries.

There is no evidence at this point that populations within the herd management areas are in excess of a thriving ecological balance so the only question then is what will be done with the wild horses removed from the excised portion of the checkerboard. It is also imperative that you provide some data that proposes how those animals will be maintained within their herd management boundary.

We cannot emphasize strongly enough that this Notice should restrict itself solely to the issue of checkerboard, and the disposition of the animals within the checkerboard. The Notice should "state", rather than put to question the issue of changing terminology of herd areas into herd management areas. All documents must clarify this procedure is to eliminate all wild horses in the Toano herd area, and remove all wild horses from north of the railroad, in the checkerboard portion of the Spruce-Pequop.

We see no purpose in altering anything in the LUP other than the correction of legal definitions of the management areas and the removal of wild horses from checkerboard. A thriving ecological balance is dynamic based on the condition of the range and unless allotment evaluation data indicates, at this time, what those levels should be, setting initial numbers is premature. If, however, the Bureau insists on addressing initial herd size, and the method of adjustment, then the following comments need to be considered.

Since there is no indication that the wild horse population within the herd management areas are in excess, any proposal to adjust that population must abide by the same rules established by the IBLA. Information necessary to provide informed in-put requires additional information such as:

- 1). Estimate of acreage within the herd management boundary
- 2). Estimate of available forage within management boundary
- 3). Map, showing waters and existing and proposed fencing
- 4). Current wild horse population within management boundary
- 5). LUP grazing use within HMA
- 6). Current active preference within HMA, and grazing system
- 7). Map, showing patterns of use for livestock and wild horses; and wildlife key areas
 - a) allotment evaluation
 - b) monitoring data

What criteria does the Bureau intend to use to determine proportions of use within the herd management area? We would want to know if the Bureau knows the key summer and winter habitats of each of these and if sufficient habitat has been delineated to serve those requirements. We would want to know whether sufficient waters are available in the remainder of their herd area, and if not how the Bureau proposes to address that issue. Since the permittee will have 100% use of the checkerboard area, which will increase his AUMs, will

Page three
Spruce Pequop/Notice of Intent
February 19, 1992

the Bureau substitute those AUMs for horses in their herd area?

We cannot make an informed decision regarding the issue to combine herd management areas without some idea of whether the Bureau has the data that shows the movement delineated on the maps; nor are we aware of criteria that would affect such a decision, such as:

- 1). Are there any pasture or allotment fences presently, and if not are any proposed to facilitate livestock management? If so, when?

- 2). Is there any movement between Maverick-Medicine, Cherry Creek, Antelope Valley and Spruce-Pequop, and Goshute?

- 3) Is there any movement between Spruce-Pequop and Goshute?

The Bureau may well have had good intentions regarding this Notice of Intent, however, we are sufficiently alarmed by the language in this Notice that provides the opportunity for all comers to once again debate the issue of herd areas in an area where historically the agency has done everything possible in the past to remove, and eliminate wild horses from the District. Only a cautious approach and clarification in future documents will demonstrate the purposes of the wordy language in a document that should have been fairly simplistic.

Most sincerely,

Dawn Y. Lappin(Mrs.)

FEB 6 1992

Dear Interested Party:

Enclosed is a copy of the Notice of Intent to amend the Wells Resource Management Plan to establish Wild Horse Herd Management Areas (Federal Register Vol. 57 p. 3062, 1/27/92). This notice serves as a Notice of Scoping for the public to participate in identification of planning issues for this amendment. A map is also enclosed to show the boundaries of the proposed areas as described in the Notice.

In accordance with the Notice, you are invited to provide written comments to the Elko District Manager, at the address above, attention Wild Horse Specialist, until March 6, 1992.

Should you have questions regarding this proposed amendment, call Bruce Portwood at (702) 753-0200.

Sincerely yours,

RODNEY HARRIS
District Manager

Enclosures

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

AGENCY: Bureau of Land Management (BLM), Interior

ACTION: Notice of Intent that the Bureau of Land Management (BLM) will prepare an amendment and associated environmental assessment (EA) to the Wells Resource Management Plan (RMP) for the management of wild horses on public lands in the Wells Resource Area, Elko County, Nevada. It is also a Notice of Scoping for the public to participate in the identification of planning issues, review of preliminary planning criteria, and formulation of alternatives for the amendment.

SUMMARY: The BLM will, pursuant to 43 CFR Part 1610.5-5, prepare an amendment to the Wells RMP to: 1) delineate wild horse herd management areas (HMAs); 2) identify wild horse habitat objectives; 3) establish wild horse management direction for: a) initial herd size, b) criteria for adjusting initial herd size, and c) constraints on other resources; and 4) combine part of the Cherry Creek Herd Area with the Maverick-Medicine Herd Area and remainder with the Antelope Valley Herd Area.

EFFECTIVE DATES: A 30-day public scoping period has been established to identify issues and concerns to be addressed in the amendment to the Wells RMP and to encourage public participation in the amendment and associated environmental process. Written comments on the scope of the amendment must be postmarked no later than March 6, 1992.

FOR FURTHER INFORMATION CONTACT: Bruce Portwood, Elko District Wild Horse Specialist, Bureau of Land Management, P.O. Box 831, Elko, NV 89801 or phone (702) 753-0200. Written comments may be sent to: District Manager, ATTN: Wild Horse Specialist, at the above address.

SUPPLEMENTARY INFORMATION: The Wells RMP encompasses over four million acres of public land in the Wells Resource Area of the Elko District and is in the east end of Elko County, Nevada. The existing Wells RMP, approved in 1985, identified wild horse Herd Areas which would: 1) continue to be monitored for wild horse populations and habitat conditions; 2) conduct gatherings as necessary and maintain populations within a range from 550 to 700 animals; 3) construct six water development projects; and 4) remove wild horses from private lands if required. However, it did not establish wild horse HMAs.

A major issue influencing this amendment focuses on the difficulties of managing wild horses on public lands intermixed with a high percentage of private lands, specifically on the checkerboard lands (areas with 50 percent or less public lands). This amendment will consider and analyze establishing HMAs in wild horse herd areas outside checkerboard lands. Wild Horse Herd areas that include checkerboard lands are the Spruce-Pequop, Goshute, and Toano Herd Areas.

The proposed issue to be addressed in this amendment is: Determine where and at what levels wild horses will be managed in wild horse herd areas in the Wells Resource Area.

The preliminary planning criteria that has been identified to be used in the development of this amendment is anticipated to be the same as that used for the development of the original Wells RMP.

A range of alternatives, stipulations, and mitigation measures, including but not limited to the No Action Alternative, will be considered to evaluate and minimize environmental impacts and to assure that the Preferred Alternative does not result in any significant impacts to the public lands in this area.

Federal, state and local agencies, and other individuals or organizations who may be interested in or affected by the BLM's decision on the amendment to the Wells RMP are invited to participate in the scoping process for this amendment. To be most helpful, comments should be as specific as possible.

WELLS AMENDMENT AND ENVIRONMENTAL ASSESSMENT AVAILABLE

The Wells Resource Management Plan Draft Wild Horse Amendment and Environmental Assessment has been released for 30 days of public review and comment.

Bill Templeton, Nevada State Director for the Bureau of Land Management (BLM), says the document is being written to guide the management of wild horses in the southeastern part of Elko County. The amendment analyzes three alternatives for the management of horses in the Wells Resource Area.

The amendment seeks to establish wild horse herd management areas, to offer solutions to problems with the "checkerboard" land pattern conflicts, to identify habitat requirements and management practices, to establish initial herd size, to develop factors to be used in adjustments in herd size, to identify constraints on other resources and to combine herd areas to improve wild horse management.

- MORE -

WELLS AMENDMENT AND ENVIRONMENTAL ASSESSMENT AVAILABLE - 22222

Individual copies of the publication may be obtained by writing the BLM, P.O. Box 831, Elko, NV 89801 or by calling 702 753-0200. Review copies are at the BLM's offices in Reno and Elko and at the county libraries in Elko, Wells and Wendover.

A proposed amendment and final environmental assessment will be written. To be considered in the development of that document, written comments should be postmarked no later than July 15. Letters should be sent to the Elko BLM at the above address.

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

Ms. Catherine Barcomb
Executive Director, Commission for the
Preservation of Wild Horses
Stewart Facility, Capital Complex
Carson City, Nevada 89710

Dear Ms. Barcomb:

This letter constitutes the Bureau of Land Management's (BLM) decision concerning your protest of November 20, 1992, on behalf of the Commission for the Preservation of Wild Horses. We have carefully reviewed and considered the issues you raised regarding the proposed Wells Resource Management Plan (RMP) Wild Horse Amendment. The purpose of this letter is to inform you of the results of that review and our decision on your protest.

ISSUE: Initial wild horse management numbers were set without considering the interaction of those horse numbers with wildlife and livestock.

RESPONSE: Other concerns such as livestock were considered in the proposed RMP Amendment. The 10 percent forage utilization limit on winter use areas prior to livestock turnout was developed in recognition of the combined impact of livestock and wild horse grazing. Utilization greater than 10 percent has led to overuse at the end of the grazing season (see Table 7 and discussion on page 14).

ISSUE: There was no evaluation of the alternatives of different combinations of numbers through the environmental assessment process.

RESPONSE: An analysis of different combinations of grazing animals in the Wells Resource Area was previously addressed in Chapter 2 of the original Draft Wells RMP completed in May 1983. The Wells RMP Record of Decision was completed in July 1985. Consequently, another analysis of this issue is not warranted. In addition, this issue was not raised during the scoping period prior to preparation of the proposed RMP Amendment. However, the relative levels of livestock and wild horse use on each herd area may be reviewed in the future when an analysis of monitoring data shows a need for an adjustment in the wild horse appropriate management levels or livestock permits.

ISSUE: The objective (page 4, number 1), "To manage wild horses only on areas where requests for removal of animals will not hinder management," is in violation of P.L. 92-195, wherein wild horses would be managed where presently found.

RESPONSE: We agree that this objective is misleading. Its intent was to specify that wild horses would be managed on public lands except in the areas of a high percentage of intermixed private lands, particularly in the checkerboard areas of the resource area. The BLM Nevada State Director has rewritten this objective to better reflect the intent. It now reads as follows: "To manage wild horses outside of checkerboard areas where land ownership patterns are not a problem for management." This change will be made to the Approved Wells RMP Wild Horse Amendment and ROD document.

ISSUE: The BLM has pre-determined initial wild horse management numbers in advance of the allotment evaluation process of which the purpose is to analyze monitoring data and establish carrying capacity by all uses.

RESPONSE: Existing monitoring data were used to determine the initial wild horse management levels as was analyzed in the proposed RMP Amendment. Overuse on winter areas has been documented and is primarily caused by wild horses as shown by utilization levels exceeding 50 percent prior to livestock turnout. Also, utilization levels were over 80 percent (livestock and wild horse use combined) at the end of the winter grazing season.

ISSUE: How can the BLM average, "statewide," a rate increase of 20 percent for the entire resource area when BLM data support various rates, in site specific areas, of anywhere from 6 percent to 35 percent. Furthermore, the BLM has assumed that horses have utilized in excess of 10 percent of the forage before livestock are turned out when in fact the BLM cannot prove, through monitoring, actual level of wild horse use.

RESPONSE: The 20 percent annual increase figure was used only to project wild horse numbers in the Current Numbers Alternative (see footnote 2, Table 2, page 10). The BLM data do show that there are various rates of increase throughout the State. However, the 20 percent figure was determined to be average and was used to project this increase for analysis in the proposed RMP Amendment.

Initial wild horse numbers developed in the proposed RMP Amendment were based on monitoring (see Table 1, page 5). It was not assumed that wild horses have used in excess of 10 percent of the forage prior to livestock turnout. Utilization monitoring and use pattern mapping have confirmed this (see Table 7 and discussion on page 14).

After careful review of the issues raised by you on behalf of the Commission for the Preservation of Wild Horses, we conclude that the BLM Nevada State Director and Elko District Manager followed the applicable planning procedures, laws, regulations, and policies in developing the proposed Wells RMP Amendment. No further changes are warranted except the clarifying language as noted herein.

This decision completes administrative review of your protest and constitutes final agency action for the Department of the Interior (43 CFR 1610.5-2(b)) on the issues which you raised in your protest. The Interior Board of Land Appeals (IBLA) does not hear appeals from a decision by the Director of the

BLM on protests concerning RMP's (Oregon Natural Resources Council, 78 IBLA 124, 127 (1983)). Any person adversely affected by a decision of a BLM official to implement some portion of an RMP may, however, appeal such action to the IBLA at the time the action is proposed for implementation.

We encourage you and the Commission to remain actively involved in the BLM's resource management activities and to provide information and input during the implementation of the proposed Wells RMP Amendment.

Sincerely,

A handwritten signature in black ink, appearing to read "Jim Baca". The signature is stylized with large, sweeping loops. It is positioned above the printed name and title.

Cy Jamison, Director
Bureau of Land Management
1849 "C" Street, N.W.
Washington, D.C. 20240

Dear Mr. Jamison,

Thank you for the opportunity to review and comment on the Wells Resource Management Plan Proposed Wild Horse Amendment and Environmental Assessment.

We formally protest the above document for the following reasons:

1) You have set initial wild horse management numbers without considering the interaction of those horse numbers with wildlife and livestock

2) There was no evaluation of the alternatives of different combinations of numbers through the Environmental Assessment process. NEPA requires that you analyze the different alternatives.

3) The objective, (page 4, number 1), "To manage wild horses only on areas where requests for removal of animals will not hinder management," is in violation of PL92-195, wherein wild horses would be managed where presently found. The law only gives BLM authority for "nuisance" removal as requested by land owners. This paragraph should instead read exactly what the purpose of this amendment to the land use will do - it will remove wild horses from areas of checkerboard land patterns - period! This could be interpreted to mean any herd area could be eliminated, even if the majority of the area were public land, if a request was repetitious.

4) You have pre-determined initial wild horse management numbers in advance of the allotment evaluation process of which the purpose is to analyze monitoring data and establish carrying capacity by all uses. According to the IBLA Decision you must determine through monitoring the appropriate management level to obtain a thriving natural ecological balance, not pre-determine a number and then justify that number with your monitoring.

5) How can you average, "statewide", a rate of increase of 20% for the entire resource area when BLM data supports various rates, in site specific areas, of increases of anywhere from 6% to 35%. What you have done, is taken that artificial 20% increase, Cy

Jamison, Director
November 20, 1992
Page 2

multiplied it times 12 AUM's per horse and pre-determined wild horse use. Furthermore, by the above formula, you have assumed that horses have utilized in excess of 10% of the forage before livestock are turned out, when in fact you can't prove, through monitoring, actual level of wild horse use. That winter use is critical, yet using your calculations you would remove approximately 75% of the herds without any monitoring data to substantiate the need!

We feel it very valuable for your Resource Area to identify the need for development of waters for better distribution of wild horses, HOWEVER, there is no time schedule identified of when you anticipate completion of these developments. Historically, BLM has identified water needs in critical areas, however, it has been a low priority for completion. We would like to recommend that if you can afford to fence area's from horse use that we would expect that you could afford the water developments at the same time.

If you have any questions or would like to discuss our concerns, we are readily available.

Sincerely,

CATHERINE BARCOMB
Executive Director

February 24, 1992

Mr. Rodney Harris, District Manager
BLM-Elko District
P.O. Box 831
Elko, Nevada 89801

Dear Mr. Harris,

Thank you for the opportunity to review and comment on the Bureau's Notice of Intent to prepare an amendment to the Wells Resource Management Plan. (Federal Register Vol. 57 p. 3062, 1/27/92.)

The notice of scoping leads the reader to believe that all herd area boundaries in the Wells Resource area are open to debate, which is not the case. The purpose of the Notice must be restricted to the re-delineation of the boundaries, to exclude only those portions that apply to the checkerboard lands. By law, the checkerboard lands must remain as wild horse herd areas, but the management of wild horses will be restricted to those portions that exclude the checkerboard. There is no questions as to the validity of the boundaries for the Maverick-Medicine, Cherry Creek, Antelope Valley, and the public land portions of the Goshute, and Spruce-Pequop.

We strongly recommend the wording in all subsequent documents clearly state the purpose of the Notice of Intent is to exclude the portions of checkerboard lands from the wild horse herd management areas, and to formalize the now existing herd use area, and to formalize the now existing herd use area boundaries into herd management area boundaries.

There is no evidence at this point that populations within the herd management areas are in excess of a thriving ecological balance so the only questions then is what will be done with the wild horses removed from the excised portion of the checkerboard. It is also imperative that you provide some data that proposes how those animals will be maintained within their herd management boundary.

We cannot emphasize strongly enough that this Notice should restrict itself solely to the issue of checkerboard, and the disposition of the animals within the checkerboard. The Notice should "state", rather than put to question the issue of changing terminology of herd areas into herd management areas. All documents must clarify this procedure to eliminate all wild horses in the Toano herd area, and remove all wild horses from north of the railroad, in the checkerboard portion of the Spruce-Pequop.

Rodney Harris, District Manager
February 24, 1992
Page 2

We see no purpose in altering anything in the LUP other than the correction of legal definitions of the management areas and the removal of wild horses from checkerboard. A thriving ecological balance is dynamic based on the condition of the range and unless allotment evaluation data indicates, at this time, what those levels should be, setting initial numbers is premature. If, however, the Bureau insists on addressing initial herd size, and the method of adjustment, then the following comments need to be considered.

Since there is no indication that the wild horse population within the herd management areas are in excess, and proposal to adjust that population must abide by the same rules established by the IBLA. Information necessary to provide informed input requires additional information such as:

- 1) Estimate of acreage within the herd management boundary;
- 2) Estimate of available forage within management boundary;
- 3) Map, showing waters and existing and proposed fencing;
- 4) Current wild horse population within management boundary;
- 5) LUP grazing use within HMA;
- 6) Current active preference within HMA, and grazing system;
- 7) Map, showing patterns of use for livestock and wild horses; and wildlife key areas;
 - a) allotment evaluation
 - b) monitoring data

What criteria does the Bureau intend to use to determine proportions of use within the herd management area? We would want to know if the Bureau knows the key summer and winter habitats of each of these and if sufficient habitat has been delineated to serve those requirements. We would want to know whether sufficient waters are available in the remainder of their herd area, and if not how the Bureau proposes to address that issue. Since the permittee will have 100% use of the checkerboard area, which will increase his AUM's, will the Bureau substitute those AUM's for horses in their area?

We cannot make an informed decision regarding the issue to combine herd management areas without some idea of whether the Bureau has the data that shows the movement delineated on the maps; nor are we aware of criteria that would affect such a decision, such as:

- 1) Are there any pasture or allotment fences presently, and if not are any proposed to facilitate livestock management? If so, when?
- 2) Is there any movement between Maverick-Medicine, Cherry Creek, Antelope Valley and Spruce-Pequop, and Goshute?

Rodney Harris, District Manager
February 24, 1992
Page 3

3) Is there any movement between Spruce-Pequop and Goshute?

The Bureau may well have had good intentions regarding this Notice of Intent, however, we are sufficiently alarmed by the language in this Notice that provides the opportunity for all comers to once again debate the issue of herd areas in an area where historically the agency has done everything possible in the past to remove, and eliminate wild horses from the District. Only a cautious approach and clarification in future documents will demonstrate the purposes of the wordy language in a document that should have been fairly simplistic.

If you have any questions, please feel free to contact me.

Sincerely,

CATHERINE BARCOMB

IN REPLY REFER TO:

1610 (NV-932.1)

October, 2, 1992

Dear Reader:

Enclosed for your review is the Wells Resource Management Plan (RMP) Proposed Wild Horse Amendment and Environment Assessment (EA). This amendment analyzes the impacts of several alternatives for maintaining and managing wild horses in the Wells Resource Area, Elko District of the Bureau of Land Management (BLM). It has incorporated all relevant comments received during public review of the draft plan. This document contains a Finding of No Significant Impact (FONSI). It is also available for a 30 day protest period.

This Proposed RMP Amendment may be protested by any person who participated in the planning process and who has an interest which is or may be adversely affected by the approval of the plan amendment. A protest may raise only those issues which were submitted for the record during the planning process (see 43 Code of Federal Regulations 1610.5-2). Protests must be filed with the Director of the Bureau of Land Management, 1849 C Street, N.W., Washington D.C. 20240. All protests must be written and must be postmarked on or before **November 20, 1992** and shall contain the following information:

- 1) The name, mailing address, telephone number, and interest of the person filing the protest.
- 2) A statement of the issue or issues being protested.
- 3) A statement of the part or parts of the document being protested.
- 4) A copy of all documents addressing the issue or issues previously submitted during the planning process by the protesting party, or an indication of the date the issue or issues were discussed for the records.
- 5) A short, concise statement explaining precisely why the BLM's Nevada State Director's decision is wrong.

Upon resolution of any protests, an Approved Amendment and Decision Record will be issued. The Approved Amendment will be mailed to all individuals who participated in its development and to all other interested publics upon their request.

Sincerely,

Billy R. Templeton
State Director, Nevada

WELLS RESOURCE MANAGEMENT PLAN

WELLS RESOURCE MANAGEMENT PLAN

PROPOSED **WILD HORSE AMENDMENT** **and** **ENVIRONMENTAL ASSESSMENT**

I. INTRODUCTION

Through a review of wild horse management in the Wells Resource Area, it was determined that problems were occurring with wild horses grazing on private lands in checkerboard areas (areas with alternating sections of public and private lands). As per P.L. 92-195, wild horses must be removed from unfenced private land when requested by the private landowner. Requests have been made to remove wild horses from private land in the checkerboard areas. These requests have been made in writing and have established horse locations on private land by legal description. The most reasonable way to address the problem of wild horses using private lands in checkerboard areas is complete removal of horses. Simply moving horses to adjacent public land areas will not keep them from returning to the private land.

It was also determined that there were no wild horse herd management areas (HMA) designated for the maintenance and management of wild horses in the Wells Record of Decision (ROD) and Approved Resource Management Plan (RMP). As a result of these determinations, the decision was made by the Nevada State Director to amend this RMP to correct these problems.

Purpose and Need for the Amendment:

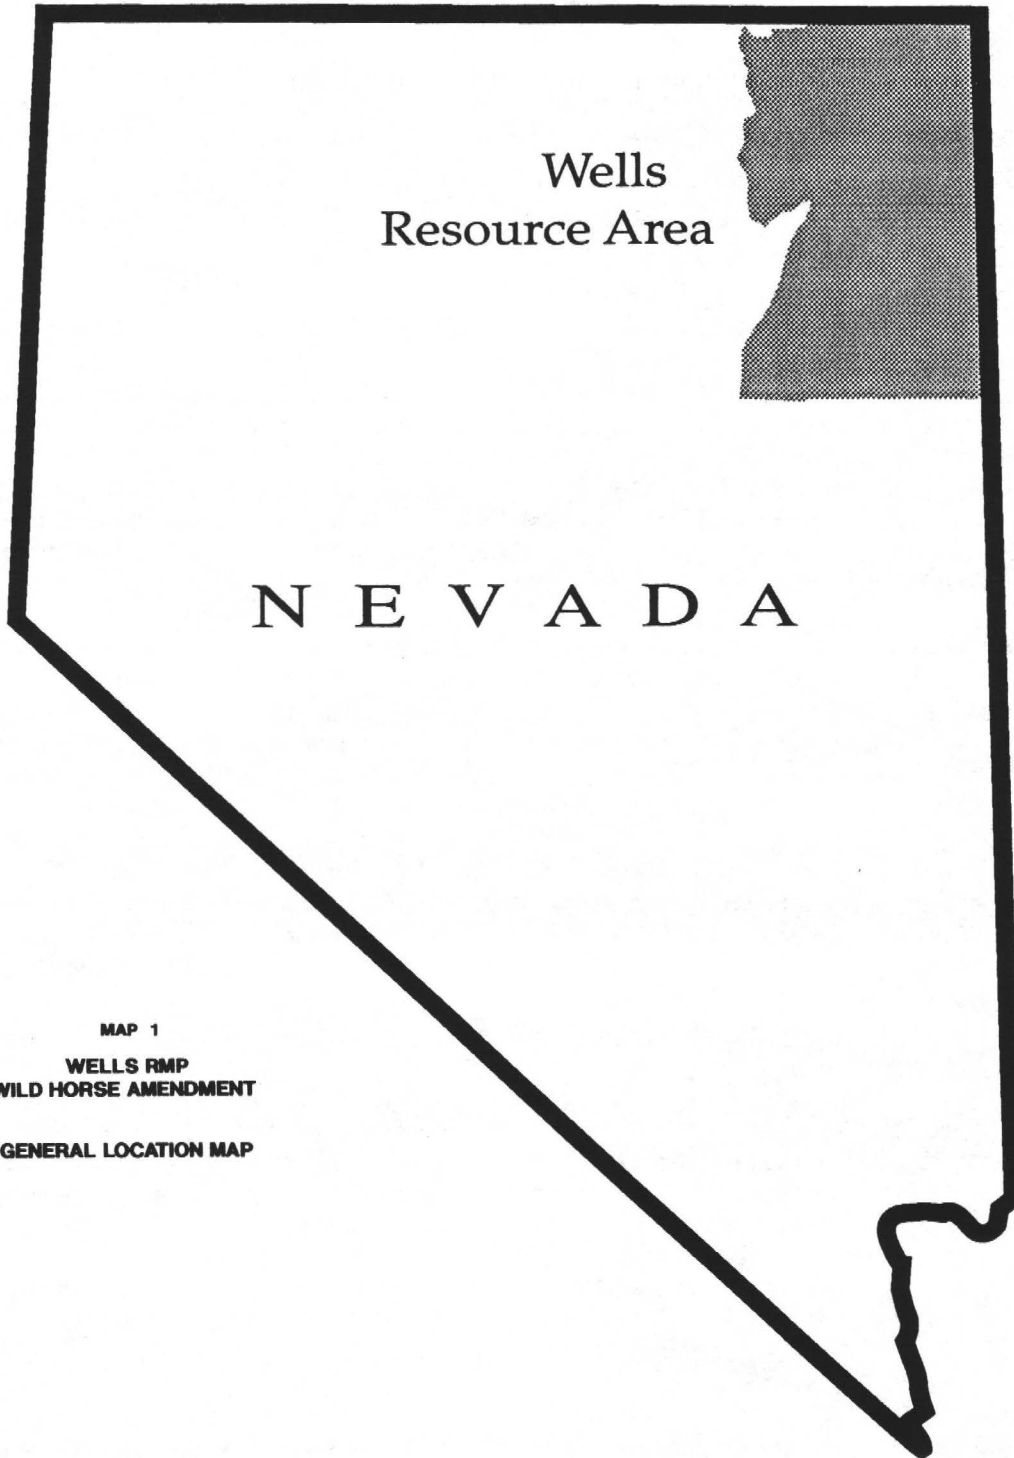

The purpose of this amendment is to establish wild horse HMAs, solve the problems with checkerboard land pattern conflicts, identify habitat requirements and management practices, establish initial herd size, develop factors for adjustments in herd size, identify constraints on other resources, and combine herd areas for the purpose of improving management of wild horses.

Location:

The Wells Resource Area is located in the northeast corner of Nevada and encompasses approximately the east half of Elko County (see Map 1, page 2). It contains 5.7 million acres, 4.3 million are public lands administered by the Bureau of Land Management (BLM). The six wild horse herd areas (areas where wild horses existed in 1971 at the time of the passage of the Wild Horse and Burro Act) that are discussed in this amendment are located in the southern half of the resource area (see Map 3, page 8, same as Map 3-4 in the Draft Wells RMP and EIS).

Planning Process:

The land use planning process, as mandated by the Federal Land Policy and Management Act (FLPMA) of 1976, is designed to enable BLM to address the issues and concerns of the public in outlining the management of the public lands within logical planning areas. This process involves nine basic planning steps. They are: 1) Identification of Issues; 2) Development of Planning Criteria; 3) Inventory and Data Collection; 4) Analysis of the Management Situation; 5) Formulation of Alternatives; 6) Estimation of Effects of Alternatives; 7) Selection of the Preferred Alternative; 8) Selection of the Proposed Plan; and 9) Monitoring and Evaluation.

Wells
Resource Area

N E V A D A

MAP 1
WELLS RMP
WILD HORSE AMENDMENT
GENERAL LOCATION MAP

This proposed amendment will address steps 1 through 8. For additional information, see the existing Draft Wells RMP and Environmental Impact Statement (EIS), the Proposed Wells RMP and Final EIS, and the Wells RMP Record of Decision and Approved Plan.

II. PLANNING ISSUES AND CRITERIA

During this amendment's 30 day scoping period, from January 28, 1992 to March 6, 1992, the public was asked by BLM to help identify planning issues and planning criteria to be used for the management of wild horses in the Wells Resource Area. The public was also asked to help identify alternatives to be evaluated in this amendment.

The following is a discussion of the purpose of planning issues and planning criteria. This discussion also outlines the issues and criteria that were used to guide the development of this amendment.

Planning Issues:

A planning issue is defined as an opportunity, conflict, or problem pertaining to the management of public lands and associated resources. Issues drive the resource management planning process and indicate specific concerns which the BLM and the public may have regarding the management of specific resources in a planning area. Identification of issues orients the planning process so that the efforts of an interdisciplinary analysis and documentation are directed toward resolution of the issues.

It has been determined that this amendment will address only the issue of wild horse management. In addressing this issue, the amendment will respond to the following planning questions:

1. In what herd areas will wild horses be maintained and managed by BLM?
2. What wild horse habitat requirements and management practices are needed for each HMA?
3. At what population levels will wild horses be managed?
4. How will adjustments be made in management levels?
5. What constraints, if any, will be placed on other resource uses?

Planning Criteria:

Planning criteria are formulated to guide the development of a resource plan or an amendment to the resource plan. Planning criteria are derived from laws, Executive Orders, regulations, planning principles, BLM national and state guidance, consultation with interest groups and the general public, and available resource information of the area. Planning criteria help to: 1) set standards for data collection; 2) establish alternatives to be analyzed; and 3) select the preferred alternative.

The planning criteria for this RMP amendment are:

1. Establish wild horse HMAs where wild horses occurred on December 15, 1971 and where land ownership patterns are compatible with management of wild horses.
2. Establish management levels by determining (minimum) numbers necessary to maintain viable herds and maximum numbers compatible with maintaining a thriving natural ecological balance and multiple use relationships.

III. PROPOSED PLAN AND OTHER ALTERNATIVES ANALYZED

Proposed Plan:

The Proposed Plan combines the management of the six existing herd areas in the Wells Resource Area into four herd management areas.

All areas of checkerboard land ownership, including all of the Toano Herd Area and portions of the Goshute and Spruce-Pequop Herd Areas, will be managed as horse free areas. The management of wild horses begins at initial herd size and will be maintained in designated HMAs. Adjustments will be based on monitoring and grazing allotment evaluations. Wild horse numbers in excess of the initial herd size would be removed within statewide priorities.

Objectives:

1. To manage wild horses only on areas where requests for removal of animals will not hinder management.
2. To manage wild horses within HMAs and to maintain a thriving natural ecological balance consistent with other resource needs.
3. To combine portions of the wild horse herd areas where horses intermix between herd areas.

Management Determinations:

Management determinations for each HMA are outlined in Table 1 and shown on Map 2, page 6.

1. Delineate four HMAs as follows:
 - Antelope Valley Herd Area
 - Goshute Herd Area
 - Maverick-Medicine Herd Area
 - Spruce-Pequop Herd Area
2. Combine the east portion of the Cherry Creek Herd Area (44 percent of the total herd area) with the Antelope Valley HMA and the west portion of the Cherry Creek Herd Area (56 percent) with the Maverick-Medicine HMA.
3. Remove all wild horses from checkerboard areas, which include all of the Toano Herd Area and portions of the Goshute and Spruce-Pequop Herd Areas and manage them as wild horse free areas.
4. Remove sufficient wild horses to attain the initial herd size and maintain populations at a level which will maintain a thriving natural ecological balance consistent with other resource values.
5. Develop eight water sources to improve wild horse distribution, modify approximately one mile of existing fence so as not to impede wild-free roaming behavior, and construct approximately eighteen miles of new fence to prevent the return of wild horses to checkerboard land patterns.

**TABLE 1
MANAGEMENT DETERMINATIONS FOR HERD MANAGEMENT AREAS - PROPOSED PLAN**

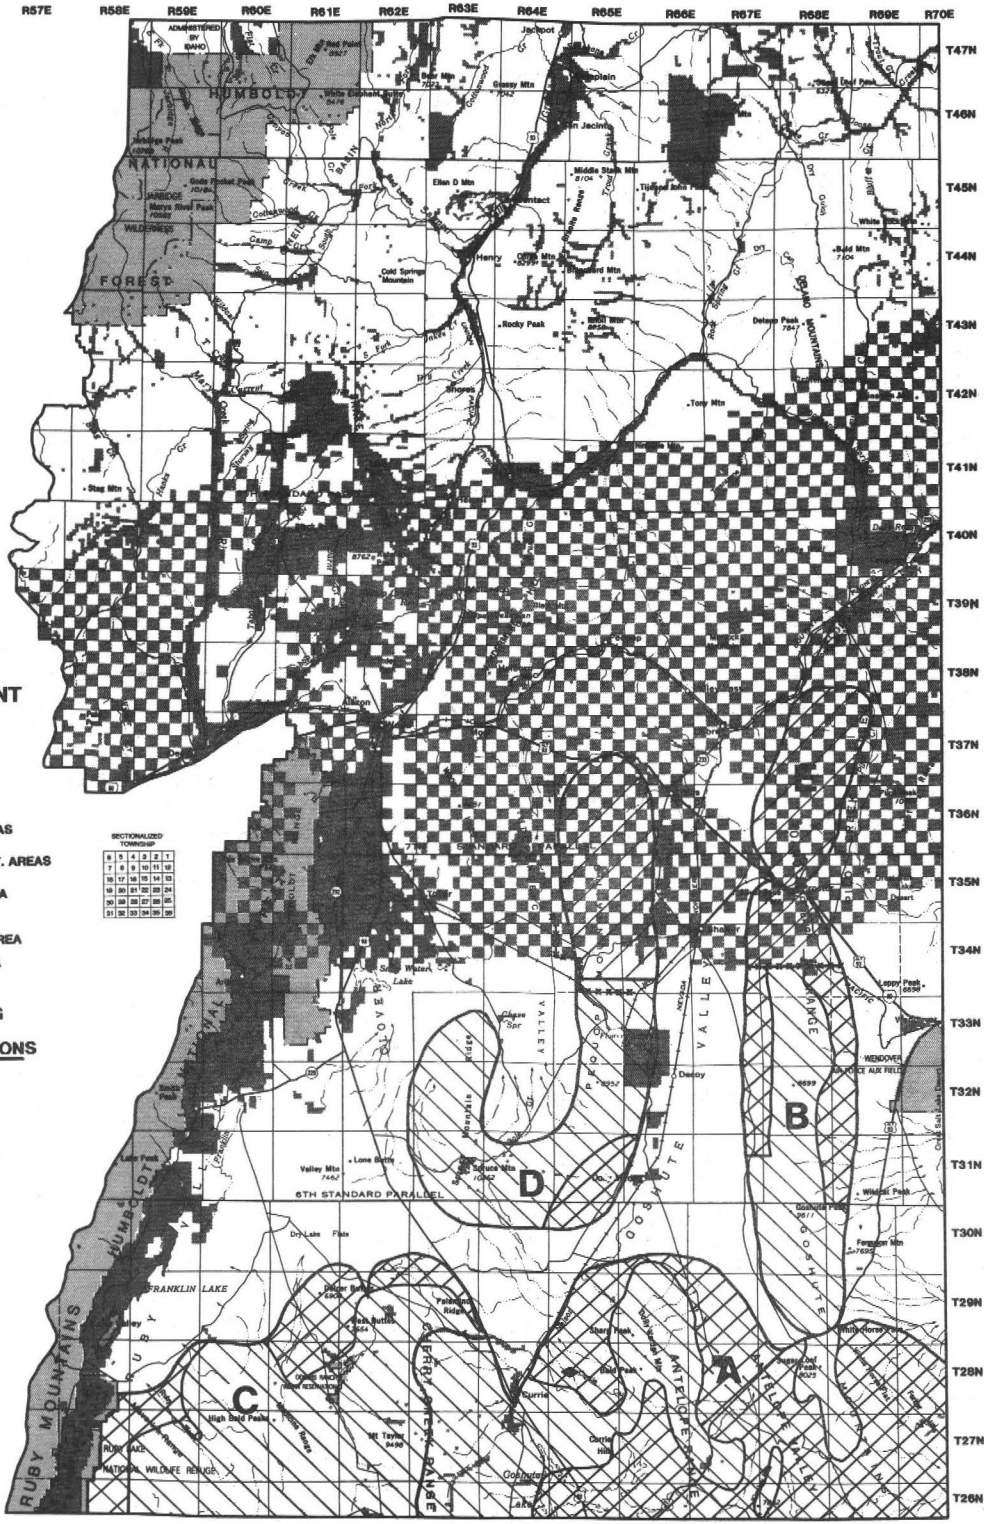

Herd Mgt Areas	Management Determinations				
	Wild Horse Habitat Requirements and Management Practices	Herd Size ¹		Herd Size Adjustment Factors	Other Resource Constraints
		Initial ²	Long-Term		
Antelope Valley ³	Develop additional waters on summer range. Modify the existing fence between the Currie and Spruce Allotments to a let-down fence (two half-mile segments).	240	Adjustments will be based on monitoring and grazing allotment evaluations.	Utilization of key forage species by wild horses in areas used in common will not exceed an average of ten ⁴ percent prior to entry by livestock.	Utilization by all grazing animals will not exceed 55 percent on key forage species by March 31st on winter range. New fencing will only be used when other practices such as control of water, salting, and herding have proved ineffective in providing proper distribution of all grazing animals.
Goshute	Develop additional waters on summer range. Construct up to nine miles of drift or gap fences, if necessary, to prevent wild horse drift north onto checkerboard lands.	160	Same as above.	Same as above.	Same as above.
Maverick-Medicine ³	Develop additional waters to provide better distribution.	389	Same as above.	Same as above.	Same as above.
Spruce-Pequop	Develop additional waters on summer range. Construct a fence (approximately nine miles) to prevent wild horse drift north onto checkerboard lands.	82	Same as above.	Same as above.	Same as above.
Total		871			

¹ Numbers are in animal units.

² The initial numbers were developed through the use of vegetative studies. Monitoring data from 1990-1992 indicates that horse use has increased on the winter range while livestock use has decreased in common use areas.

³ The initial number of horses for the Cherry Creek Herd Area have been incorporated into both the Antelope Valley (25 percent) and Maverick-Medicine (75 percent) HMAs.

⁴ Ten percent use of key forage species (midpoint of slight use category) by wild horses prior to entry by livestock is the level that can be used and still not exceed the total use of 55 percent by March 31st in areas used in common by all grazing animals.

1	2	3	4	5	6	7	8	9	10	11	12
13	14	15	16	17	18	19	20	21	22	23	24
25	26	27	28	29	30	31	32	33	34	35	36
37	38	39	40	41	42	43	44	45	46	47	48

No Action Alternative:

The management of wild horses will continue under the existing short and long-term management actions (management determinations) as they currently exist in the Approved Wells RMP (see Map 3, page 8).

Objectives:

1. To continue management of the six existing wild horse herds consistent with other resource uses.

Short and Long-Term Management Actions:

1. Continue to monitor wild horse populations and habitat conditions.
2. Conduct wild horse gatherings as necessary and maintain populations within a range from 550 to 700 animals. The Toano Herd would be maintained at 20 animals (see Table 2).
3. Construct six water development projects (catchment type) with storage tanks and troughs.
4. Remove wild horses from private lands if required.

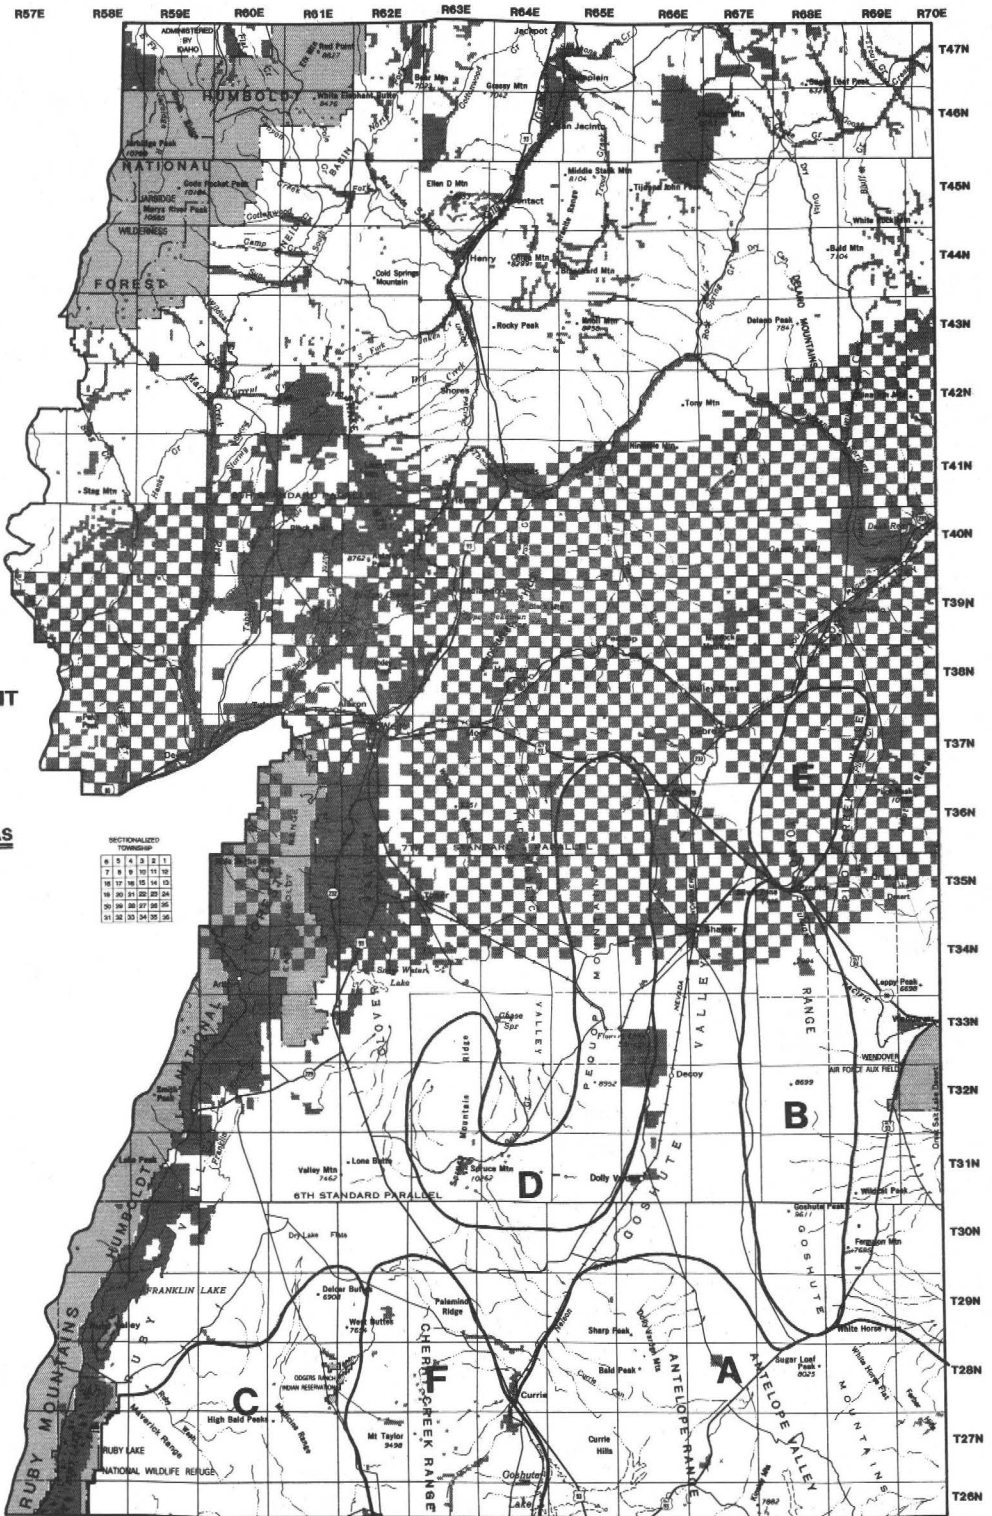

**TABLE 2
WILD HORSE HERD AREA CHARACTERISTICS¹**

Herd Area	Herd Size		Resource Conflicts		Conflict Allotments
	1978	1981 ²	Fences	Humans ³	
Antelope Valley	449	164			
Cherry Creek	74	64	X		Currie, West Cherry Creek
Goshutes	129	120		X	Big Springs, Pilot
Maverick-Medicine	112	244	X		Maverick, West Cherry Creek, Spruce, Odgers, Currie
Spruce-Pequop	-	80	X	X	Big Springs, Spruce
Toano	-	20	X	X	Big Springs, Pilot
Totals	764	692	-	-	

¹ The information in this Table has been brought forward from the Draft Wells RMP to show the average number of wild horses by herd area that were to be maintained within the range of 550 to 700 animals for the Wells Resource Area (see Table 3-3 on page 3-8 in the Draft Wells RMP and EIS).

² The total for 1981 is less than 1978 because animals were removed in 1980.

³ Requests have been received by various private landowners to remove wild horses from unfenced private lands since 1987.

19	20	21	22	23	24
25	26	27	28	29	30
31	32	33	34	35	36

Current Numbers Alternative:

The management of wild horses will continue with current numbers and any adjustments will be based on monitoring and grazing allotment evaluations.

All areas of checkerboard land ownership, including all of the Toano Herd Area and portions of the Goshute and Spruce-Pequop Herd Areas, will be managed as horse free areas. Adjustments will be based on monitoring and grazing allotment evaluations. Wild horse numbers in excess of the optimal herd size established by allotment evaluations would be removed within statewide priorities for removal of wild horses.

Objectives:

1. To manage wild horses only on areas where requests for removal of animals will not hinder management.
2. To manage wild horses within HMAs and to maintain a thriving natural ecological balance consistent with other resource needs.
3. To combine portions of the wild horse herd areas where horses intermix between herd areas.

Management Determinations:

Management determinations for each HMA are outlined in Table 3 and shown on Map 2, page 6.

1. Delineate four HMAs as follows:
 - Antelope Valley Herd Area
 - Goshute Herd Area
 - Maverick-Medicine Herd Area
 - Spruce-Pequop Herd Area
2. Combine the east portion of the Cherry Creek Herd Area (44 percent of the total herd area) with the Antelope Valley HMA and the west portion of the Cherry Creek Herd Area (56 percent) with the Maverick-Medicine HMA.
3. Remove all wild horses from checkerboard areas, which include all of the Toano Herd Area and portions of the Goshute and Spruce-Pequop Herd Areas and manage them as wild horse free areas.
4. Develop eight water sources to improve wild horse distribution, modify approximately one mile of existing fence so as not to impede wild-free roaming behavior, and construct approximately eighteen miles of new fence to prevent the return of wild horses to checkerboard land patterns.

**TABLE 3
MANAGEMENT DETERMINATIONS FOR HERD MANAGEMENT AREAS - EXISTING NUMBERS ALTERNATIVE**

Herd Mgt Areas	Management Determinations				
	Wild Horse Habitat Requirements and Management Practices	Herd Size ¹		Herd Size Adjustment Factors	Other Resource Constraints
		Current ²	Long-Term		
Antelope Valley ³	Develop additional waters on summer range. Modify the existing fence between the Currie and Spruce Grazing Allotments to a let-down fence (two half-mile segments).	538	Adjustments will be based on monitoring and grazing allotment adjustments.	Utilization of key forage species by wild horses in areas used in common will not exceed an average of ten ⁴ percent prior to entry by livestock.	Utilization by all grazing animals will not exceed 55 percent on key forage species by March 31st on winter range. New fencing will only be used when other practices for livestock management, such as, control of water, salting, and herding have proved ineffective in providing proper distribution of all grazing animals.
Goshute	Develop additional waters on summer range. Construct up to nine miles of drift or gap fences, if necessary, to prevent wild horse drift north onto checkerboard lands.	396	Same as above.	Same as above.	Same as above.
Maverick-Medicine ³	Develop additional waters to provide better distribution.	770	Same as above.	Same as above.	Same as above.
Spruce-Pequop	Develop additional waters on summer range. Construct a fence (approximately nine miles) to prevent wild horse drift north onto checkerboard lands.	82	Same as above.	Same as above.	Same as above.
Total		1786			

¹ Numbers are in animal units.

² The current number of wild horses were determined by using a 20 percent annual increase. This percentage is a result of data obtained from wild horse gathers conducted statewide. These totals were calculated by using the number of foaling seasons from the last inventory through the time this amendment is projected to be completed in October, 1992.

³ The current number of horses for the Cherry Creek Herd Area have been incorporated into both the Antelope Valley (25 percent) and Maverick-Medicine (75 percent) HMAs.

⁴ Ten percent use of key forage species (midpoint of slight use category) by wild horses prior to entry by livestock is the level that can be used and still not exceed the total use of 55 percent by March 31st in areas used in common by all grazing animals.

Summary

Table 4 summarizes the wild horse herd size for the Proposed Plan and by alternative. Table 5 displays the acreage by ownership category of the wild horse herd areas for the Proposed Plan and alternatives. Approximately 44 percent of the current Cherry Creek Herd Area is proposed to be combined with the Antelope Valley HMA and 56 percent combined with the Maverick-Medicine HMA under the Proposed Plan and Current Numbers Alternative.

**TABLE 4
WILD HORSE HERD SIZE FOR PROPOSED PLAN AND ALTERNATIVES**

Herd Areas	Herd Size		
	Proposed Plan	No Action Alternative	Current Numbers Alternative
Antelope Valley	240	164	538
Cherry Creek	(combined)	64	(combined)
Goshute	160	120	396
Maverick-Medicine	389	244	770
Spruce-Pequop	82	80	82
Toano	0	20	0
Total	871	692	1,786

**TABLE 5
ACREAGE OF WILD HORSE HERD AREAS**

Herd Areas	Acres by Ownership Category		Totals	
	Public Lands	Private Lands	Proposed Plan and Current Numbers Alternative	No Action Alternative
Antelope Valley	400,000	1,500	463,540	401,500
Cherry Creek	138,000	3,000	(combined)	141,000
Goshute	266,800	16,000	250,800 ¹	282,800
Maverick-Medicine	207,000	500	286,460	207,500
Spruce-Pequop	172,000	34,000	138,000 ²	206,000
Toano	57,500	57,500	0 ³	115,000
Total	1,241,300	112,500	1,138,800	1,353,800
¹ The reduction in acreage between the Proposed Plan and the Current Numbers Alternative and the No Action Alternative is because approximately 32,000 acres within checkerboard land areas will be managed as a wild horse free area.				
² The reduction in acreage between the Proposed Plan and the Current Numbers Alternative and the No Action Alternative is because approximately 68,000 acres within checkerboard land areas will be managed as a wild horse free area.				
³ This area will be managed as a wild horse free area.				

IV. AFFECTED ENVIRONMENT

The Affected Environment section provides additional information to assist the reader in understanding the existing situation and the current problems encountered with managing wild horses in the Wells Resource Area. For a more detailed discussion of the environment within the areas of concern, refer to the Draft Wells Resource Management Plan and Environmental Impact Statement of May, 1983.

The following additional information is displayed by resource category:

WATER

Six water developments were identified to be developed under the existing Wells RMP. Two of these waters have been developed (see Map 4, page 13) and four remain to be developed. Four additional waters need to be developed to provide adequate water for wild horses. Their locations will be specifically identified during HMA plan preparation and will be constructed as funds become available.

Numerous springs within HMAs provide an adequate quantity of water for grazing animals. However, current water quality is poor as springs are trampled and water is degraded by mud and fecal matter.

Inadequate water sources exist on the west side of the Goshute Mountains, Medicine Range, Currie Hills, and the area east of U.S. Highway 93 in the Antelope Valley HMA.

There are also wells developed with private funds located within the HMAs that are pumped only when livestock are present and are not considered permanent or dependable water sources for wild horses.

WILD HORSES

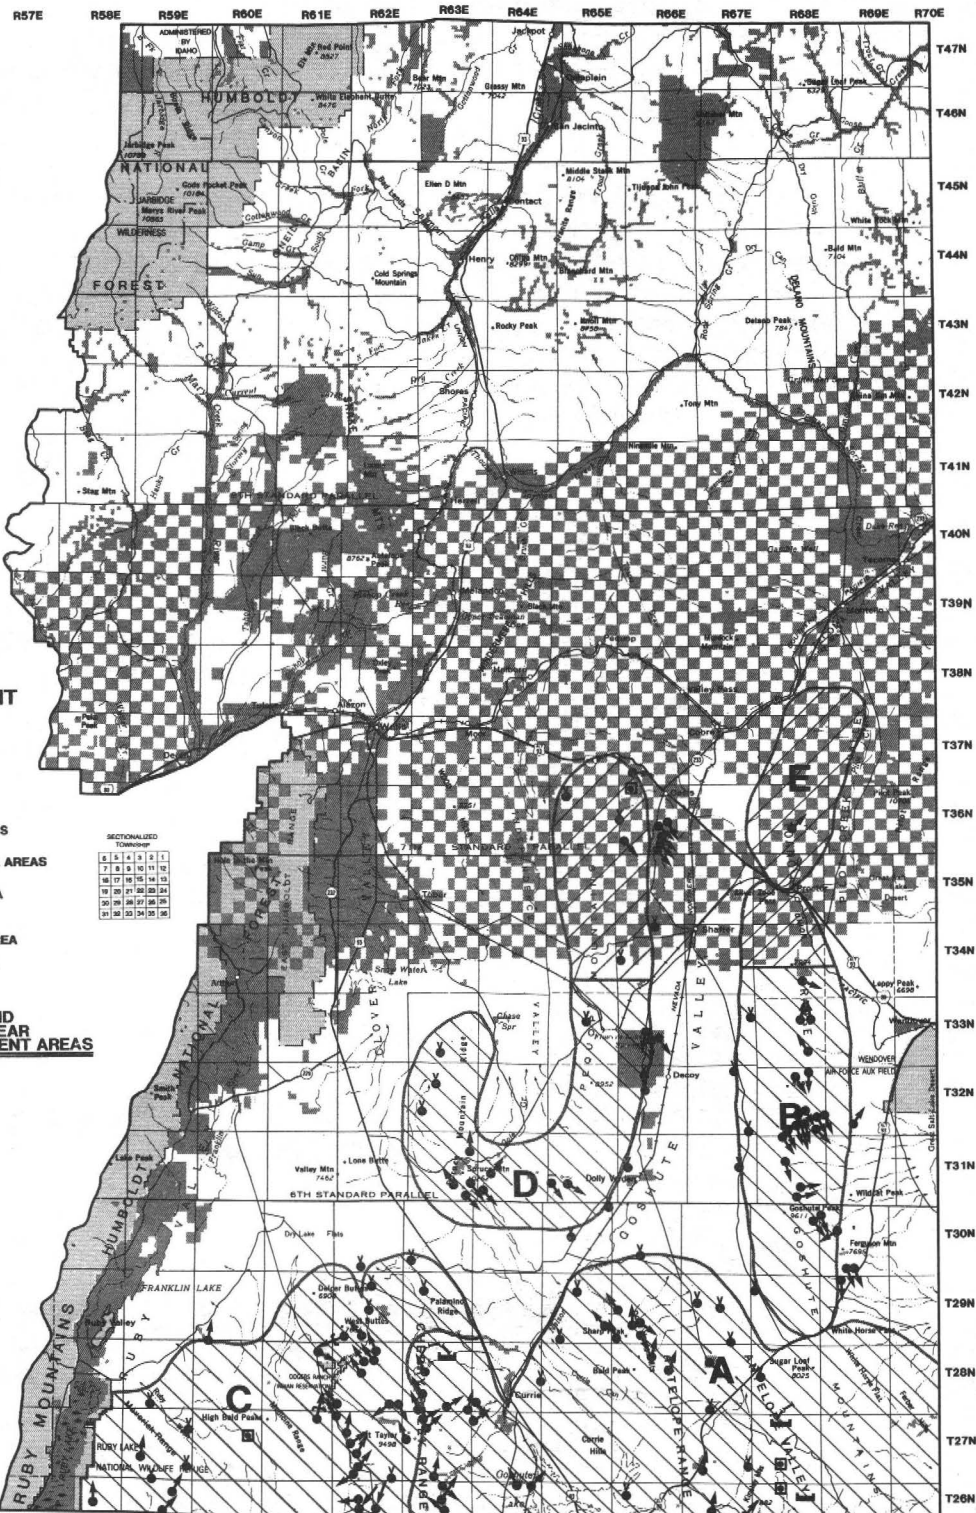

The most recent inventory information on wild horse numbers is listed in Table 6 below.

TABLE 6
WILD HORSE INVENTORY INFORMATION

Herd Area	Number of Horses	Date of Inventory	Projected Current No. ¹
Antelope Valley	336	2/91	484
Cherry Creek	180	7/91	216
Goshute	229	3/90	396
Maverick-Medicine	507	7/91	608
Spruce-Pequop	193	6/91	232
Toano	28	10/89	41
Totals	1,473		1,977

¹ The current numbers of wild horses were determined by using a 20 percent annual increase. This percentage is a result of data obtained from wild horse gathers conducted statewide. Totals were calculated by using the number of foaling seasons from the last inventory through the time this amendment is projected to be completed in October, 1992.

Problems exist with the current fencing between the Currie and Spruce Allotments. Fences have impeded wild horse movements affecting wild-free roaming behavior. Wild horses have run into fences not only causing damage to the fence, but also injury or death to themselves.

- PIPELINE

SECTIONALIZED TOWNSHIP

6	5	4	3	2	1
7	8	9	10	11	12
13	14	15	16	17	18
19	20	21	22	23	24
25	26	27	28	29	30
31	32	33	34	35	36

The horses on unfenced private lands within the checkerboard land pattern areas, are using private forage and water. The waters are also being trampled and water quality degraded by mud and fecal matter.

The ridge line in the Cherry Creek Mountains essentially divides the current Cherry Creek Herd Area. Horses that summer on the west side of the Cherry Creek Mountains and Cottonwood Basin also winter in the Maverick-Medicine HMA. Horses on the east side of the Cherry Creek Mountains intermingle with horses from Antelope Valley HMA and also winter in this HMA.

VEGETATION

The availability of forage in the winter use areas is considered the most limiting factor for wild horses. The key species for winter use areas are white sage and Indian ricegrass (for a complete listing of vegetative types, please refer to pages 3-25 through 3-30 of the Draft Wells RMP).

It is important to provide forage adequate to carry wild horses and livestock through the winter use period without exceeding the utilization objectives of 55 percent on key grass and shrub species. The 55 percent utilization level is in accordance with the monitoring guidelines set forth in the Nevada Rangeland Monitoring Handbook.

The current utilization objective for wild horse grazing on winter use areas, prior to the entry of livestock which occurs between November 1st and December 31st, has been established at an average of ten percent (see footnote 4 on Tables 1 and 3) of current years growth on key grass species such as Indian ricegrass (see Table 7). Limiting wild horse use to ten percent on key grass species, prior to the entry of livestock, should leave enough forage to carry wild horses and livestock through the winter use period and not exceed utilization objectives. Ten percent use is the midpoint of the slight use category and managing for this utilization level will maintain or improve vegetation condition and maintain a thriving natural ecological balance. Wild horse use has exceeded this utilization limit on winter use areas within three of the herd areas as shown in Table 7.

**TABLE 7
WILD HORSE UTILIZATION ON WINTER USE AREAS
PRIOR TO ENTRY BY LIVESTOCK**

Herd Management Area (Area data taken)	Key Species	Percent Utilization by Wild Horses Prior to Livestock Use	Date Utilization Measured
Antelope Valley (Dolly Varden)	Indian ricegrass	48	11/7/90
Goshute (West side)	Indian ricegrass	59	12/7/90
Maverick-Medicine (North side)	Indian ricegrass	40	10/16/91

Most of the wild horses that occupy the above three herd areas concentrate their winter use in the portion of the herd area where excessive utilization has been recorded (see Map 2, page 6). On October 16, 1991, use on the north side of the Maverick-Medicine HMA was recorded at 40 percent. By March 3, 1992, combined use in the same area was 80 percent. Very little signs of livestock were observed in the area.

where were they?

Wild horse distribution needs to be improved to reduce concentration areas around water. Trampling and overuse of vegetation leads to death of plants resulting in bare ground. This leads to soil compaction and these areas do not recover easily.

LIVESTOCK

The location of the grazing allotments in relation to the 1971 Wild Horse Herd Area are shown on Map 5, page 16. Grazing systems have been implemented on the Currie, West Cherry Creek, and North Butte Valley Allotments. Construction of the few fences to implement these systems were built to accommodate the normal movement patterns of wild horses (please refer to Table 2-1 on pages 2-3 through 2-6 of the Draft Wells RMP and EIS for a listing of livestock grazing preferences (AUMs) by allotment). Existing livestock fences and allotment boundaries in relation to proposed wild horse herd management areas are shown on Map 6, page 17.

WILDLIFE

(Please refer to Appendix A3-1 on page A3-2 of the Draft Wells RMP and EIS for a listing of existing and reasonable numbers for wildlife.)

V. ENVIRONMENTAL CONSEQUENCES

This section outlines the environmental consequences that will result from implementation of the management determinations for the Proposed Plan and Alternatives as listed under heading III. above. These projections are based on available information and knowledge of the area by personnel in the Wells Resource Area and the Elko District. Any numbers given are approximate and are used as a basis to quantify impacts. The reader should not infer that they reflect exact or precise totals.

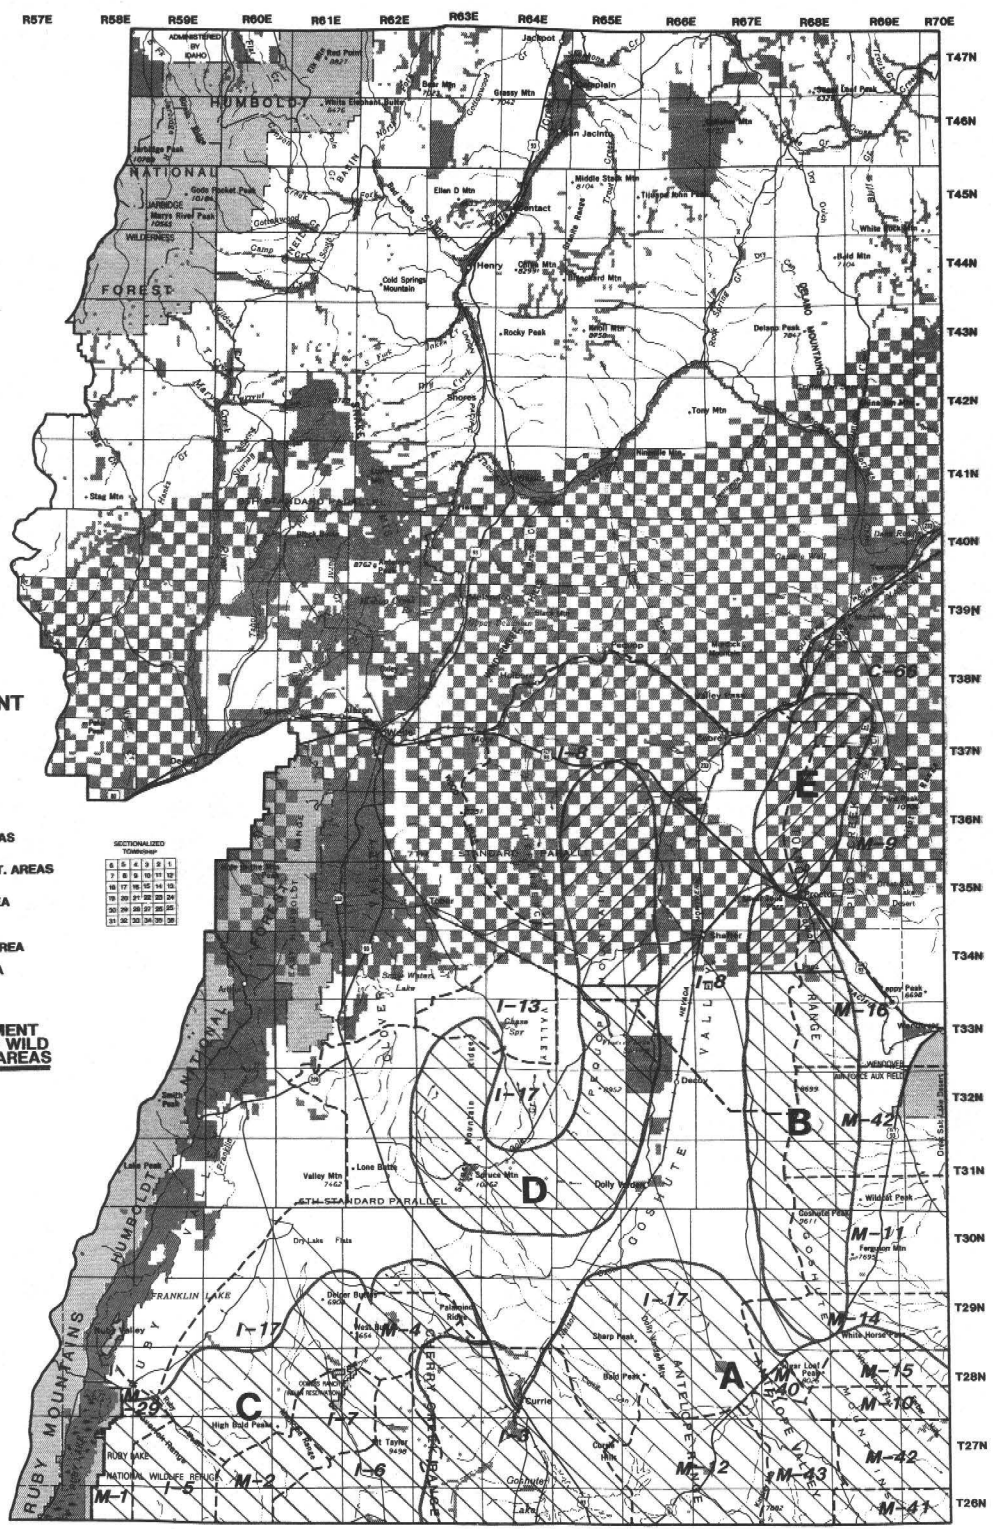

Proposed Plan:

1. The development of eight water sources would provide for higher quality water and better distribution of water for all animals. Development of existing springs would provide better quality water and development of new waters would improve distribution and reduce pressure on vegetation around existing waters.

The modification of the allotment boundary fence between the Currie and Spruce Allotments will allow for the wild-free roaming behavior of wild horses in the Antelope Valley HMA. The fence will be modified to a let-down fence in areas where horses have continually damaged the fence. This portion would be let down when livestock are not in the area not only allowing free movement of wild horses between the allotments, but also preventing injury to horses that may otherwise run into the fence. During the period of time the fence would be let down corresponds to wild horse movements between the allotments.

Maintaining initial herd size would reduce competition and tendency for wild horses to move outside of wild horse HMAs. With increasing horse numbers, bands within the HMAs compete for space and forage.

2. Removal of the checkerboard lands from areas where wild horses would be maintained and managed would reduce or eliminate most conflicts, such as consumption of private forage and water, on 107,500 acres of unfenced private lands.
3. Combining the Cherry Creek Herd Area with the Antelope Valley and Maverick-Medicine HMAs will more accurately reflect the actual on-the-ground occupation and movement of wild horses and allow for more efficient planning, monitoring, and management of wild horses.
4. Establishing initial herd size will maintain a thriving natural ecological balance consistent with other multiple uses.

LIVESTOCK FENCES AND NATURAL BOUNDARIES IN RELATION TO PROPOSED WILD HORSE MANAGEMENT AREAS

- EXISTING FENCES
- UNFENCED ALLOTMENT BOUNDARIES
- LET-DOWN FENCES

No Action Alternative:

1. Four additional waters proposed in the Proposed Plan and the Existing Numbers Alternative would not be developed, thus not helping provide for better distribution of horses in all herd areas. This will continue to create grazing pressure on vegetation near water causing reduced plant vigor and poor vegetative condition. The springs will continue to be trampled and water quality degraded by mud and fecal matter.

Wild horse drift would continue to be limited between the Currie and Spruce Allotments, thus affecting the wild free-roaming nature for some horses in the Antelope HMA.

2. Wild horses would continue to exist in the checkerboard areas and occupy the entire 1971 herd areas. The difficulty of keeping wild horses off alternate sections of unfenced private lands would continue in the checkerboard areas thus allowing continued use of 107,500 acres of unfenced private lands.
3. The Cherry Creek Herd Area would continue to be managed as a separate and distinct herd area, but would not be reflective of the actual on-the-ground occupation and movement of wild horses into the adjoining Antelope Valley and Maverick-Medicine HMAs. This would result in inefficient planning, monitoring, and management of wild horses in these three herd areas.
4. Wild horse numbers have not been maintained to the levels identified in the Wells ROD and RMP as a result of recent court rulings. This has resulted in overuse of vegetation and has caused horses to begin moving outside of herd area boundaries because of overcrowding.

Current Numbers Alternative:

1. Higher quality water sources and better distribution of water would provide improved wild horse habitat. Development of existing springs would provide better quality water and development of new waters would improve distribution and reduce pressure on vegetation around existing waters.

The modification of the allotment boundary fence between the Currie and Spruce Allotments will allow for the wild-free roaming behavior of wild horses in the Antelope Valley HMA. The fence will be modified to a let-down fence in areas where horses have continually damaged the fence. This portion would be let down when livestock are not in the area not only allowing free movement of wild horses between the allotments, but also preventing injury to horses that may otherwise run into the fence. During the period of time the fence would be let down corresponds to wild horse movements between the allotments.

Removal of excess wild horses would be delayed until completion of the allotment evaluation procedures; therefore, wild horse numbers would increase exceeding established use levels, causing damage to vegetation, and resulting in not maintaining a thriving natural ecological balance. Use above 55 percent of key species by March 31 will result in reduced forage production, reduced soil fertility, and lower the soils capacity to retain moisture.

Although allotment evaluations have not been completed for these areas, a review of monitoring data indicates that the current horse numbers are in excess of what would be an optimal number. Therefore, retaining current numbers and monitoring would not maintain a thriving natural ecological balance. There would be increased pressure for wild horses to move outside HMAs.

2. Removal of the checkerboard lands from areas where wild horses would be maintained and managed would reduce or eliminate most conflicts, such as the consumption of private forage and water, on 107,500 acres of unfenced private lands.

3. Combining the Cherry Creek Herd Area with the Antelope Valley and Maverick-Medicine HMAs will more accurately reflect the actual on-the-ground occupation and movement of wild horses and allow for more efficient planning, monitoring, and management of wild horses.

VI. COORDINATION, CONSISTENCY, AND PUBLIC PARTICIPATION

The determination to complete the Wells RMP Wild Horse Amendment was made in December, 1991. A "Notice of Intent" was published in the Federal Register on January 27, 1992. This notice also included a scoping period during which the public was requested to assist the BLM in identifying planning issues, planning criteria, and identifying alternatives they wish to be analyzed in the amendment. A letter to all interest groups, individuals, and agencies was sent on February 6, 1992. A news release was prepared and sent to all newspapers in northern Nevada. Fifteen people submitted written or verbal comments during scoping. These comments were used to help the BLM prepare the draft plan amendment.

The Wells RMP Draft Wild Horse Amendment and EA was made available for a 30 day public review period in early June, 1992. A "Notice of Availability" of the draft document was published in the Federal Register on June 9, 1992. It was mailed to all individuals, agencies, and groups who expressed an interest in this planning process (see list below). A news release was also prepared and sent to all newspapers in northern Nevada indicating the availability of the draft document and asking for public review and comment. The public comment period for the draft ended on July 15, 1992.

Written Comments Received on the Draft Plan

Three comment letters were received during the 30 day public review period of the draft document. Each letter was reviewed and all substantive comments which questioned facts or analysis or commented on issues discussed in the Draft Plan Amendment have been evaluated and responded to in this document (see Appendix A).

VII. LIST OF PREPARERS

This amendment was prepared by an interdisciplinary team of resource specialists from the Wells Resource Area, Elko District (see Table 8).

**TABLE 8
LIST OF PREPARERS**

Dear Sir:

I write this letter to comment on the
Draft Wild Horse Amendment and
Environmental Assessment.

I support Alternative 2, the
preferred alternative, although I
feel that once again it is the
true aim of the B. L. M. to
ultimately destroy all of the
wild horses for the sake
of private citizens who want
the range.

1-1

Sincerely,

Dr. Edgar B. Robinson, Jr

RESPONSE TO LETTER NO. 1

- 1-1 The purpose of the Wild Horse Amendment to the Wells Resource Management Plan is to establish herd management areas (HMA) and initial management levels for wild horses. It is proposed to continue to manage wild horses in four HMAs involving 1,138,800 acres of public lands.

COMMENT LETTER NO. 2

Dear Sirs:

I just finished reading your "Wells Resource Management Plan, Draft Wild Horse Amendment and Environmental Assessment" and thank you for sending it to me. While I commend your efforts to provide for the wild horses, I am not satisfied with the decision you are announcing here. Although still not content, of the three alternatives presented, Alternative 3 seems the best. I object to the reduction of herd area size by elimination of checkerboard herds. I know that your regulation or policy states that you must do this at the request of any private landowner, but this is a serious flaw and shows that the BLM is not willing to "go to bat" for the wild horses. After all, these same adjacent private land owners are themselves utilizing the public lands for their grazing of livestock. It is only proportionate or fair then that they accommodate the wild horses in the area. There is leverage here to gain much needed respect for the wild horses if only the government officials would employ it. I thus object to the removal of horses from the Toano Herd Area and portions of the Goshute and Spruce-Pequop Herd Areas until you have negotiated for their retention. If any private landowner can cause the entire removal of a herd of wild equines, I see the distinct possibility for the eventual demise of the wild horses. Those that remain will be no longer truly wild, but prisoners in artificially controlled pastures.

2-1

I commend you on the development of water sources and recommend that other habitat requirements be ensured: forage, shelter, mineral, area, etc., in order to meet the needs of a viable herd population. I would say that 500 breeding adults or about 750 total herd size would be required to avoid overbreeding and allow survival of the herd in the long-term. I recommend a variety of topographic situations for each herd area, including both valleys and mountains, wherever possible. Thus the horses can descent in the cold winter and ascend during the summer, rotating their grazing pressure as they do. This also relates to their avoiding becoming the brunt of fierce blizzards during the winter of becoming victims of intense heat and sun during the long summers. It is more truly what is meant by "maintaining thriving, free-roaming wild horse populations".

2-2

On page 14, I am very doubtful of the 20% rate of increase for the wild horse populations. If the horses are reproducing near their biological maximum, this would indicate that there is a vacant niche for them which they are naturally trying to fill on the public range. At least they should be allowed to bring their herd sizes up to minimally viable populations.

2-3

On page 19, under Alternative 3: Current Numbers, I

COMMENT LETTER NO. 2 (Continued)

Input: Wells RMP, Draft Wild Horse Amend. & E.A.
July 2, 1992

commend the modification of the fence in order to allow for the wild, free-roaming behavior of the wild horses in the Antelope Valley HMA. This would ensure the completion of the wild horse's migration patterns which represent their attempts to balance forage consumption over time and allow the regeneration of grazing areas according to instinctive, age-old patterns. This also related to the their obtaining an adequate and balanced diet.

2-4 On page 20, I am not satisfied with the arguments concerning grazing pressure of the wild horses as reasons for rejecting Alternative 3. This seems arbitrary and self justifying. Instead the BLM should display more forthrightness in arguing for decent herd sizes and the habitat requirements that go with them! BLM, meaning its public employees, must not be too willing or eager to concede to public lands' exploiters when deciding how many wild horses will remain, how large an area they shall occupy, etc.

2-5 Though of the three alternatives I favor #3, I still object to its plan to eliminate wild horses on checkerboard lands, for reasons given above, and to the combining of the Cherry Creek Herd Area with the Antelope Valley and Maverick-Medicine HMA's. The reasons given sound OK, but combining the three would weaken the wild horse's political presence, tending to further whittle down the populations in the long run.

2-6 Finally, I second the motion to continue careful monitoring of range condition, but insist that actual impact of the wild horses be distinguished from that of other herbivores: cattle, sheep, and other wild animals. Too often there is a tendency to lump these grazing pressures. Since no one is directly profiting from the wild horse -- except in spirit or in ecological ways that are not commonly thought of -- the wild horse too often becomes the scapegoat for vested interests. Consequently, it is the duty of government employees to uphold the full intent of the law and not cave in to vested interests, who become remarkably blind to the natural values when short-term profit or advantage is to be had. BLM's pre-1988 manuals indicate how to distinguish among the different species as to grazing pressure, and I recommend that you employ them. Also consider the entire picture of the public lands, so that the wild horses are not overly magnified wherever they occur. In fact they are only a small portion of the public lands grazing pressure, i.e. less than one percent. Please don't begrudge them even this. Personally I think they deserve at least ten percent.

-- It's great being able to again comment on your plans for the wild horses; and don't think that I fail to appreciate your work and careful consideration of the public interest. Hoping to learn of your enlightened decision and to visit the herds soon, I am,

Respectfully yours,

Craig C. Downer
P.O. Box 456, Minden, Nevada 89423

RESPONSE TO LETTER NO. 2

- 2-1 The Wild Horse and Burro Act, P.L. 92-195, as amended, states that wild horses will be removed from private lands when requested by the owner (see Sec. 4 of the Act). This Amendment will provide for the establishment of wild horse herd management areas (HMA), eliminate wild horse conflicts on private lands, and provide for improved management of wild horses in the Wells Resource Area.
- 2-2 By law, populations of wild horses must be managed for a thriving ecological balance. This takes into consideration use by other grazing animals. This amendment outlines the initial wild horse herd size by herd management area to meet an ecological balance. Monitoring and allotment evaluations will determine any long-term adjustments in numbers. All four herd management areas contain a variety of topographic features to allow for year round wild horse habitat.
- 2-3 The 20 percent annual increase is based on data obtained from wild horse gathers conducted statewide (see Table 3, footnote 2 on page 11 and Table 6, footnote 1 on page 14 of the Draft Amendment). Allowing wild horse populations to increase would be detrimental to the vegetation resource and would not maintain a thriving ecological balance for all animals.
- 2-4 The discussion on page 20 of the Draft amendment is part of the environmental consequences if Alternative 3 is implemented. It is based on established utilization limits to protect vegetation developed through range management research and the Nevada Task Force Monitoring Handbook.
- 2-5 See response 2-1 for a discussion of the removal of wild horses from checkerboard lands.
- HMA's were combined to assist with management of wild horse herd areas and to more accurately represent wild horse movements and year-long habitat requirements as was discussed on page 19 and 20 of the Draft Amendment.
- 2-6 Monitoring of range condition in Nevada is conducted in accordance with the Nevada Task Force Monitoring Handbook.

re: Wells RMP Wild Horse Amendment

Dear Mr. Portwood:

I am writing on behalf of the American Horse Protection Association, Inc., to comment on the draft wild horse amendment/environmental assessment to the Wells Resource Management Plan.

AHPA certainly approves of the Bureau's decision to amend the RMP to insure that wild horse herd management areas are included in the Wells RMP. It also approves of BLM's intention to develop water sources to improve wild horse distribution in the HMAs. However, the Association has a number of questions and comments concerning the proposed action, especially the decision to reduce horse numbers by approximately 50 percent. They are as follows.

3-1

1. There is almost no information in the draft amendment which explains the current condition of vegetation in each of the HMAs, its trend, total AUM production and potential, the number of livestock using the HMAs (both historically and currently), and the seasons of livestock use. It is apparent that the reduction of wild horse numbers proposed in Alternative 2 is based in large part on anticipated competition between livestock and wild horses, especially during the winter. Nor is there any specific information about what portion of the horse populations depend on the winter use areas. Without this information it is extremely difficult to understand the factual basis for the Bureau's proposal and to comment in a meaningful way. Nor does it appear that there is any reason to reduce the size of the wild horse herds significantly.

COMMENT LETTER NO. 3 (Continued)

Bruce Portwood
District Wild Horse Specialist
July 15, 1992
Page 2

- 3-2 | 2. It is also difficult for AHPA to understand the significance of the data presented in Table 7, regarding wild horse utilization on winter use areas. How was this utilization determined? How many study plots were examined, and on what portions of the winter use areas? How did BLM ascertain that this utilization was by wild horses alone? Without this information, it is impossible to conclude if the data reported is representative of all of the winter use areas.
- 3-3 | 3. How, and why, did BLM determine that a 10 percent utilization by wild horses on the winter use area, prior to the entry of livestock, was appropriate? What proportion of the remaining use (45%) during the winter is attributable to livestock?
- 3-4 | 4. AHPA disagrees with the Bureau's use of a 20% net rate of increase in herd size, both because it is grossly excessive on a year-in, year-out basis, and because it may not be at all typical of the actual recruitment rate in each of the individual HMAs. Furthermore, even using the 20% rate, Table 6 overstates the projected current population of Antelope Valley by at least 40 animals.
- 3-5 | 5. It is not clear from the draft that requests to remove wild horses from private lands relate to all three HMAs in which checkerboard lands appear, or for the entire checkerboard area in those HMAs. The draft should specify where requests have been made; if they do not cover all of the checkerboard areas, the draft should explain why the proposed action is appropriate.
- 3-5 | More generally, AHPA disagrees with the Bureau's contention that when a documented 1971 HMA involves some private land, the "most reasonable" way to address wild horse use of private lands is to remove the horses. If horses were using private lands in 1971 as part of their historic ranges, the Wild Horse Act seems to protect them there.
- 3-6 | 6. How many AUMs do the checkerboard lands in the HMAs produce? Will livestock numbers on the public lands in these areas be permitted to increase after the horses are removed? If so, by how many, and during what seasons of use?
- 3-7 | 7. The proposed fence in the Spruce-Pequop HMA appears to be located two miles south of the closest private land, and four

COMMENT LETTER NO. 3 (Continued)

Bruce Portwood
District Wild Horse Specialist
July 15, 1992
Page 3

3-7 | miles south of most of the private land. Why isn't it located close to the private land boundary, as it is in the Goshute HMA?

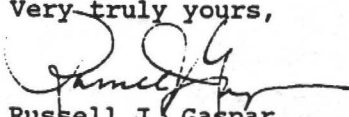

3-8 | 8. AHPA cannot comment regarding the proposal to combine the Cherry Creek HMA with the Antelope Valley and Maverick-Medicine HMAs because the draft does not contain adequate information. The Association does recognize that the rationale for this decision is to "more accurately reflect the actual on-the-ground occupation and movement of wild horses." However, the draft contains no information describing wild horse use and movement patterns, and it is difficult to determine from Map 6 whether natural or artificial boundaries play a significant part in the decision.

3-9 | Furthermore, AHPA does not understand why 25 percent of the Cherry Creek herd population has been incorporated in the Antelope Valley HMA (Table 2, note 3) when 44 percent of the total herd area will be combined with Antelope Valley (page 7, management determination 2). Does the majority of the herd have its home ranges in the western portion of the Cherry Creek HMA, closer to Maverick Medicine? If so, how was this determined? How does it relate to the herd sizes established by the proposed action?

3-10 | Because the Association has so many fundamental questions regarding the rationale for the preferred alternative which are not answered in the draft/EA, AHPA must oppose the draft. The Association asks that the draft be amended to provide the information it has requested above, and recirculated so that AHPA and other interested parties can have an effective opportunity to comment.

Thank you for your courtesy and assistance.

Very truly yours,

Russell J. Gaspar
Attorney for American Horse
Protection Association, Inc.

cc: Robin C. Lohnes

RESPONSE TO LETTER NO. 3

3-1 The Draft Amendment document is the first step in the amendment process to the original Wells Resource Management Plan (RMP) and as such does not repeat the volume of information from the original document. Most of the information asked for is found in the original RMP,

The information concerning winter use and use by wild horses prior to livestock entry may be found on page 15 and Table 7 of the Draft Amendment. Table 7 indicates use by wild horses prior to entry by livestock. This use is at or exceeds what should be the total use for the winter season by all classes of grazing animals.

3-2 Utilization was measured at key areas located within the winter use areas. In addition, use pattern maps were made of each winter use area. Since no livestock were authorized or observed in the areas prior to when utilization was measured, all use was determined to be by wild horses.

3-3 When use prior to livestock entry did not exceed 10 percent, the total use by all animals did not exceed 55 percent at the end of the grazing season. As use by wild horses has increased prior to livestock entry, the total combined use has exceeded the 55 percent level (55 percent utilization by the end of the grazing season has been determined to be the proper use level for key forage plants of these areas). At the present time, wild horse use prior to livestock entry is at or exceeds the 10 percent level.

3-4 The 20 percent annual increase is based on data obtained from wild horse gathers conducted statewide (see Table 3, footnote 2 on page 11 and Table 6, footnote 1 on page 14 of the Draft Amendment). In Table 6, the projected current number of wild horses for Antelope Valley HMA is corrected to 484 and the projected current number for Goshute HMA is corrected to 396 wild horses.

3-5 Requests to remove horses from private lands have been received for the Spruce-Pequop and Goshute HMAs. No requests have been received for the Toano HMA, however with the amount of private land involved and as horse numbers increase, conflicts may arise. This amendment makes the determination that wild horses will not be managed in the checkerboard areas and will allow for their removal from these areas to resolve current conflicts with private lands and to prevent future conflicts. The Wild Horse and Burro Act, PL 92-195, as amended, protects wild horses on public land but does not protect them on private land (see Sec. 4 of the Act).

3-6 Animal unit months (AUMs) produced in the checkerboard areas of the Spruce-Pequop Herd Area is approximately 4,500 AUMs, the Goshute Herd Area is approximately 950 AUMs, and the Toano Herd Area is approximately 2,100 AUMs. Adjustment in livestock numbers in the Wells Resource Area will be through allotment monitoring and evaluations. The current season of use by livestock in the Goshute checkerboard area is winter; the Spruce-Pequop checkerboard area is spring/summer; and the Toano checkerboard area is winter.

3-7 The fence in question is a proposed allotment boundary fence for the management of livestock and will also serve to effectively keep wild horses from drifting from the south end of the Spruce-Pequop Herd Area to the north end (checkerboard area). There is very little advantage to building another fence two miles north of this proposed fence to prevent drift into the checkerboard area.

RESPONSE TO LETTER NO. 3 (Continued)

- 3-8 The rationale for combining herd areas is found on page 14 of the Draft Amendment.
- 3-9 The 25 percent refers to the wild horse population (numbers) and the 44 percent refers to area (acres). Existing monitoring has determined the initial herd size in the Preferred Alternative accommodates for the combining of these herd management areas. The majority of horses from the Cherry Creek herd area summers on the west side of the Cherry Creek mountains and winter in the Maverick/Medicine Herd Management Area.
- 3-10 In responding to issues you raised as well as those raised by other members of the public, it was determined that no significant changes were necessary to be made with the Draft Amendment. Therefore, the Draft Amendment will not be re-issued for further review and comment. Comments received on the draft has been used to prepare the Proposed Wells RMP Wild Horse Amendment and Environmental Assessment.
