

in the fluctuation of a river
at what time does the first
snow-water reach the Panah?

Central Pass Comice Creek. (Dead stub above
Comice).

31 10 p.m. Wednesday

Stream 15 in. x 1 in. (Greatest depth $1\frac{1}{2}$ in.)
level raised by gash near stump
with rocks above and by 2 nails.
Temp 31⁺°F.

Forgot to visit this again

Visited Friday morning.

Snow Comice on nose of pass back of Refuge

Camp -

31 20 p.m. Notice tiny ribbon stream perhaps five
or more rods long - which if dries in
Wed a little delta - holds for 24 ds. back
in narrow dry. Why?

31 45 Weds Notice water running from
Comice divide east side of West Point,
and from smaller knave to the east.
The water glitters like ~~the~~ shimmering crystal
