

White's Creek - Saturday

6:40 a.m.

Lowest Water Crest below notch

Highest Water Crest below notch

Temp $33\frac{1}{2}^{\circ}$ F.

Water below all stakes
stones except West Stake in
Sheep hole & come

to the stream here and
have apparently raised the
water in the better
channel as it very met

The signs are of a sudden
fall - but the presence of
sheep tracks should explain
phenomenon.

By evidence of wet rocks down
stream the water fell
the night actually only.

Current

Paced at	24 ft. in 8 sec.
Timed by watch	24 feet in 6 sec.
[15 sticks long]	24 " in 8 sec.
= 23.1 feet	24 " in 8 sec.

Galena

Friday 12:20 p.m.

Course from N.W. Seepage Creek
entirely & starts in Aspen Boggs
1 mile away.

Stake set last evening.
Water exactly at notch
as it was when stake
was set. Fluctuation evidently
none ~~stake~~

Main Stream

Lowest wave crest [] below = $1\frac{1}{4}$ inch
point of  Water marks on trees
now as wide

Water much clearer than when
stream is higher at high tide.
Stake by stone (south) is just covered
by high wave crest.

West plug so far above water
[] = $1\frac{1}{8}$ in.

West stake on notch above
water so far

Temp $48\frac{1}{2}$ F

Stream by east stake as deep
see notch on this.

Flow last
night

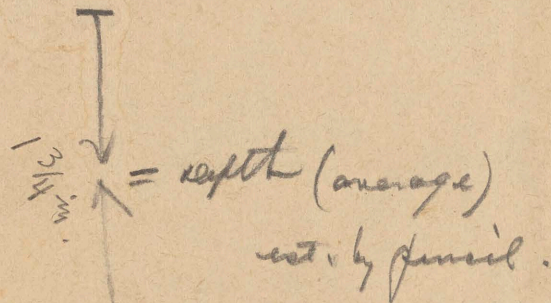

$1\frac{1}{8}$
 $2\frac{1}{4}$
 $2\frac{1}{8}$

Half way from Bows (Source of Main
Creek) to Meadow.

Friday 10:51 a.m.

Strong stream from Aspen Boggs

Width - 3 times length of green
cloth edge

Current $4\frac{1}{2}$ feet in 5 sec. (est.)

Water was higher yesterday ($3\frac{3}{8}$ in.
See wet mats & silt beds higher at least)

Shining that
have discs
slang.
